

VISION PEOPLE[®] CHANNELSALES

Key Features

- Standard web shop functionality based on .Net
- Get access to data and functionality from Microsoft Dynamics NAV
- Ready for multi languages, multi currencies and VAT
- Maintain pages, pictures, prices and product lists from Microsoft Dynamics NAV
- Easy development of individual functionality

Standardized and flexible

All controls and templates are based and compliant to the XHTML 1.1 standard. If necessary all generated HTML markup can be modified to fit almost every design and requirement.

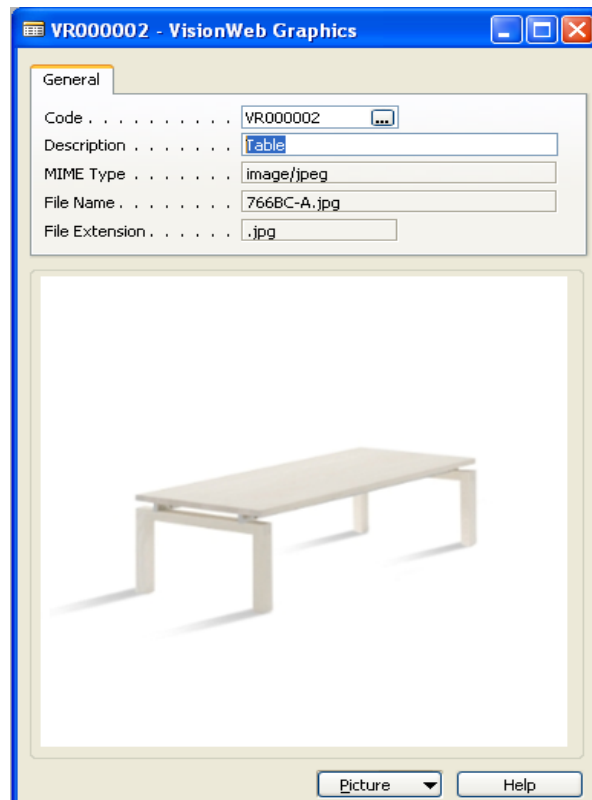

VisionWebShop

The standard .Net based web shop for Microsoft Dynamics™ NAV

From the web shop you have access to relevant data and functionality from your Microsoft Dynamics NAV business solution. For example price calculation and reports like shipments and invoices can be sent by e-mail to the customer. VisionWebShop is ready for multi languages and multi currencies and VAT. All categories and texts are translatable and Navision translation of captions and products will be used.

E-mails are maintained in Microsoft Dynamics NAV with possibilities of several languages and attached files. The standard shop includes the possibility to send the following e-mails: Create User, Forgot Password, Order Confirmation, Shipment, Invoice, Reports (Statement, Customer/Item Sales and Customer - Order Detail).

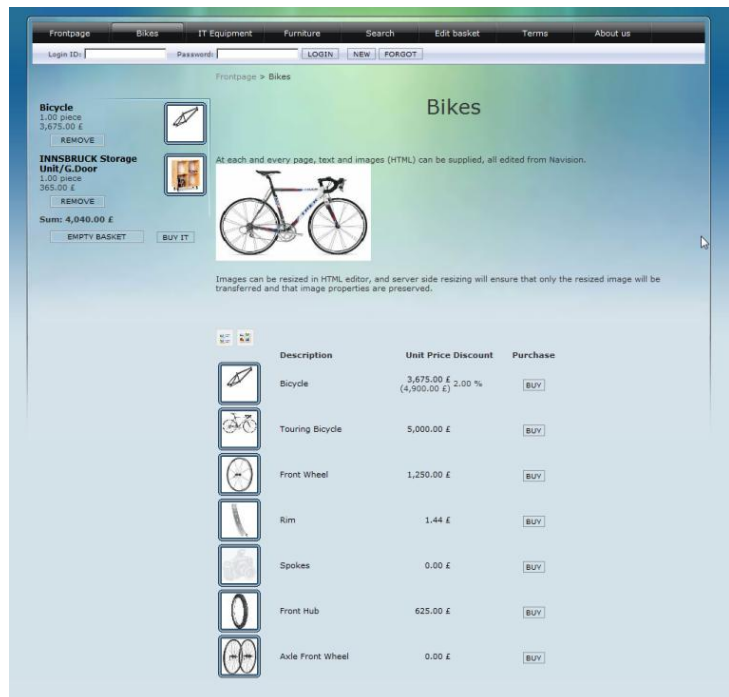

Images are also maintained in Microsoft Dynamics NAV (Gif and Jpeg):

Product list

Product list can be shown as bigger images or as a shortlist, with image and product title. Other ways to find a product:

- Related products. At every product some related products can be defined.
- Others also bought. A periodic activity count what others who bought the product also bought
- Most popular products. A periodic activity counts the most popular items.
- Products on sale. Products marked as “on sale” with a new price. Both the old and the new price will then be shown.

Mini CMS

All pages are maintained as categories in Microsoft Dynamics NAV where the page hierarchy and page content (HTML) are edited. By associating a product to one or more categories, the product will be shown at the page. Products can be associated to categories at all levels.
